

AlbaCombi

Analog NMEA2000 Converter Module

DESCRIPTION

The Alba-Combi is a state of the art analogue to NMEA2000 converter that covers the most demanding applications. The Alba-Combi has six 0V to 32V channels and another additional six channels can be configured in voltage or resistive 0 to 600 ohms mode. There are also two RPM inputs available, one PTC and one shunt input.

The Alba-Combi will convert all those channels to temperature, pressure, voltage, tank levels, current, engine status, etc. You will be able to use that information to populate all the available 15 NMEA2000 PGNs. Calibration is done through the Ethernet port provided and the unit can be upgraded via the RS232 port.
