1 Introduction

Congratulations on your purchase of the Simarine PICO Battery Monitor. Simarine developed a state of the art DC Battery monitor. Simarine’s PICO is a water and dust resistant device used to monitor DC power sources as batteries and solar panels. The information is displayed on a large 3,5” high resolution IPS display with Gorilla Glass and anti-reflective coating to ensure superior visibility.

PICO is capable of monitoring up to 6 batteries, 14 tanks, 14 temperatures and 20 independent current sensors (Shunts).

PICOone is capable of monitoring up to 2 batteries, 2 tanks, 2 temperatures and 20 independent current sensors (Shunts).

PICO and PICOone are equipped with a Wi-Fi module to communicate with the PICO application available for Android and iPhone smartphones. The application allows accessing live data, analyzing history data, configuring PICO and perform a firmware upgrade of PICO.

2 Accessories

SC300 Digital Shunt – SIMARINE High Precision 300A Shunt
SC500 Digital Shunt – SIMARINE High Precision 500A Shunt
SC302T Digital Shunt – SIMARINE High Precision 300A Shunt with 2 resistance inputs for tank level measurement and 2 voltage inputs for measuring voltages of two batteries.
SCQ25 Quadro Digital Shunt Module – SIMARINE High Precision 4x25A Shunt
SCQ25T Quadro Digital Shunt and Tank Module – SIMARINE High Precision 4x25A Shunt and Tank Interface Module with 4 resistance and 3 voltage inputs.
ST107 Digital tank interface module with 4 resistance and 3 voltage Inputs
3 Safety

Installation of Simarine electronics should be made by electrical specialists with proper safety equipment. When working with batteries you should wear protective clothing and eye protection.

CAUTION: Batteries contain acid, a corrosive, colorless liquid that will burn your eyes, skin and clothing. Should the acid come in contact with eyes, skin or clothing, wash it immediately with soap under fresh water for at least 15 minutes, and seek medical support immediately.

CAUTION: Do NOT connect anything to a damaged battery. It could heat up, catch fire or explode.

CAUTION: Lead-acid batteries can generate explosive gases during operation. Never smoke, allow flames or sparks near the battery. Make sure to keep sufficient ventilation around the battery.

CAUTION: When working with a battery, remove all personal metal items like watches, rings, necklaces and bracelets. Metal items in contact with the battery terminals might cause a short circuit with a very high electric current, which may heat up and melt nearby objects and cause severe burns.

4 Declaration of conformity

MANUFACTURER: SIMARINE d.o.o.
ADDRESS: Ulica skofa Maksimilijana Drzecnika 6, SI-2000 Maribor, Slovenia, EU

Declares that the following product:
PRODUCT TYPE: PICO

Conforms to the requirements of the following Directives of the European Union:
The above product is in conformity with the following harmonized standards:
EN61000-6-3: 2001 EMC - Generic Emissions Standard, EN61000-6-2: 2005 EMC - Generic Immunity Standard
5 Installation

5.1 PICO mounting

SIMARINE PICO should be installed in a visible place to provide good readability. Please note that ONLY the PICO/PICOone display unit is water and dust resistant! Any other modules including splitter should not be exposed to high humidity or liquids in any case. The mounting process and installation cutouts depend on the model, as described in following sections.

5.2 PICO standalone

PICO Standalone version has dimensions of 98 x 84 x 10 mm (3.85 x 3.30 x 0.39 in) and needs NO installation cutout. The mounting process requires drilling of 5 (PICOone) or 6 (PICO) mounting holes and access to the rear of the mounting surface. In case you have NO rear access, you can bond it using supplied double sided tape.

Step to be taken for proper mounting:

1. Before the drilling, check if there is enough space to mount your PICO.
2. Mark mounting holes using the supplied installation template.
3. Drill all holes.
4. Connect the connector on the back side of PICO to the splitter cable (be sure to align the pins correctly) and fasten it by turning the safety ring clockwise.
5. Finish mounting PICO from the back side with the supplied threaded rod and nuts. Screws, rods and nuts MUST be fastened by hand. Excessive force may damage the threads on PICO.
5.3 PICO panel-mount

PICO Panel-mount version dimensions are 108.5 x 94 x 10 mm (4.27 x 3.70 x 0.39 in). It needs an installation cutout of 98 x 83mm. It can be mounted with supplied threaded rods and brackets or bonded with adhesive if there is no rear access to the mounting surface.

Steps to be taken for proper mounting:
1. Before cutting out, check if there is enough space for your PICO.
2. Mark the cutout line with the supplied installation template.
3. Using a saw, carefully cut out the marked area.
4. Connect the connector on the back side of PICO to the splitter cable (be sure to align the pins correctly) and fasten it by turning the safety ring clockwise.
5. Finish mounting PICO from the back side with the supplied threaded rod and nuts. Screws, rods and nuts MUST be fastened by hand. Excessive force may damage the threads on PICO.
5.4 Connecting

5.4.1 Power cable

Minimum power cable cross-section requirement at maximal temperature of insulation: 70 °C (160 °F).

<table>
<thead>
<tr>
<th>Continuous current</th>
<th>Cable cross-sectional area</th>
</tr>
</thead>
<tbody>
<tr>
<td>500 A</td>
<td>220 mm²</td>
</tr>
<tr>
<td>400 A</td>
<td>150 mm²</td>
</tr>
<tr>
<td>300 A</td>
<td>95 mm²</td>
</tr>
<tr>
<td>200 A</td>
<td>50 mm²</td>
</tr>
<tr>
<td>100 A</td>
<td>25 mm²</td>
</tr>
</tbody>
</table>

CAUTION: Failure to observe the required cable cross-sections can damage the shunt, wiring, or cause fire.

5.4.2 SiCOM data cable

For the SiCOM connection use the supplied cable. If not possible, use the following table to determine the right cable type.
<table>
<thead>
<tr>
<th>Cable length</th>
<th>Cable type</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt; 5m</td>
<td>No limitations</td>
</tr>
<tr>
<td>&gt;= 5m</td>
<td>2 x 2 x 0.25 mm² Twisted pair (recommended)</td>
</tr>
</tbody>
</table>

Pico is connected to the SiCOM bus via attached Splitter, which is an entry point for other devices and for the power connection. Splitter must be connected to the power (6-35V) with red/black cable. It is recommended that the power cable is connected behind the main switch, so you can power off the complete system, although the total power consumption of the system is very low (usually <100mA at normal operation).

5.4.3 How to connect a SC300/SC302T/SC500 Shunt
You can find the latest SC300/SC500 Digital shunt manual on this link (or visit our website: https://www.simarine.net).

5.4.4 How to connect a SCQ25 Quadro Digital Shunt module
You can find the latest SCQ25 QUADRO DIGITAL SHUNT MODULE on this link (or visit our website: https://www.simarine.net).

5.4.5 How to connect a Shunt SCQ25T Quadro Digital Shunt and Tank module
You can find the latest SCQ25 QUADRO DIGITAL SHUNT AND TANK MODULE manual on this link (or visit our website: https://www.simarine.net).

5.4.6 How to connect a ST107 Tank module
You can find the latest ST107 TANK MODULE manual on this link (or visit our website: https://www.simarine.net).
6 Basic setup

PICO’s menu management is transparent and easy to use. All changes can be done using four touch buttons below the screen. Menus and settings on the picture below can differ from the menus and settings on your device, since future firmware upgrades might cause some minor changes in the menus and settings.

Long press button to enter the settings menu.

A - Label indicates current position in the menu
B - Currently selected item
C - Arrow indicates there is at least one more menu item in arrow direction
D - Arrow indicates there is a sub menu
E - Arrow indicates there is at least one more menu item in arrow direction
F - BACK BUTTON, is used to navigate one level back or leave the settings menu.
G - UP BUTTON is used to navigate up in the menu, or changing value or switching screens in live view.
H - DOWN BUTTON is used to navigate down in the menu, or changing value or switching screens in live view.
I - ENTER BUTTON, long press activates settings, short press commits changes or enters selected submenu.
6.1 Start screen after first connection

After installation and first connection you should see a screen similar to the one shown below.

![Graph showing barometric pressure and changes over time with timestamps and current pressure reading.]

After the first power-on there are no batteries and tanks defined and Pico only shows a barograph screen. Please long press button to enter the settings menu.

6.2 Language settings

You can change the device’s language by navigating to GENERAL SETTINGS → LANGUAGE. You can choose between English and German language. More languages will be added with future firmware upgrades.

6.3 Units

You can change units by navigating to GENERAL SETTINGS → UNITS. There, you can select your preferred units for pressure, temperature, tank volume and altitude.

6.4 Battery configuration

PICO shows all properly configured batteries. Each correctly configured battery will automatically show up on PICO. The following section describes how to set up a battery on PICO.
6.4.1 Add new battery

The following steps are equal for SC300, SC302T and SC500 digital shunts. In the settings menu, navigate to DEVICE > BATTERIES. Select “Add new” and fill in the requested data.

- Name the battery/battery bank accordingly (STARTER, SERVICE, MAIN, etc.)
- Select the battery type (Wet low maintenance, Wet maintenance free, AGM, Deep cycle, Gel, LiFePO4)
- Fill in the battery capacity for the next C ratings: C/20, C/10 and C/5. If you don’t know all the ratings, fill in just those ratings that you know. It is highly recommended to fill at least two C ratings (one is not enough for precise calculations).
  A “C” rating is simply a battery’s capacity (or Ah/amp hour rating) when discharged over a specific period. The “C” rating is usually specified on the battery label.
  For correct operation, unknown ratings must be set as “Not set”!
- Select a voltmeter which is connected to the battery. You can see only voltmeters that are not already used by other battery configurations.

![VOLTMESSERS](image)

- Select the current sensor which is connected to the battery. You can select only current sensors that are not already used by an existing battery configuration.
  For a battery configuration without a shunt, leave current sensor empty.
- Select a temperature sensor if you have one installed.
- Confirm and save the battery configuration with **button.
The newly added battery should now be visible on one of the PICO’s screens once you exit the settings menu.

6.5 Tank configuration

PICO shows all properly configured Tanks. Each configured Tank will automatically show up on PICO. The following section describes how to set up a tank on PICO.

6.5.1 Add new Tank

The following steps are equal for SCQ25T/SC302T/ST107 modules. It is required to properly install your module of choice. The installation is described in the corresponding module manual. After successfully installing the module, you can configure the tank by following these steps: In the settings menu, navigate to DEVICES → TANKS. Select “Add new” and fill in the requested data.

- **NAME** - Name the tank accordingly (FRESH WATER, WASTE WATER, FUEL 1 etc.)
- **TYPE** - Select the tank type (WATER, FUEL, WASTE WATER), which defines the color of the tank on PICO’s screen.
- **SENSOR TYPE** - Select the used sensor type (RESISTANCE or VOLTAGE)
- **SENSOR** - Select the used sensor from the list.

<table>
<thead>
<tr>
<th>SETTINGS</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>&lt;OHMMETERS</strong></td>
</tr>
<tr>
<td>SC500 [0216835249]</td>
</tr>
<tr>
<td>ST107 [0167137256] R1</td>
</tr>
<tr>
<td>ST107 [0167137256] R2</td>
</tr>
<tr>
<td>ST107 [0167137256] R3</td>
</tr>
<tr>
<td>ST107 [0167137256] R4</td>
</tr>
</tbody>
</table>

- **CAPACITY** - Input the tank full capacity.
• CALIBRATION POINTS - Add calibration points for different tank levels. At least two calibration points are required for proper configuration. More calibration points will enable PICO to show tank level more accurately. Up to 11 calibration points can be added. For each calibration point, tank fill volume (liters or gallons) and a corresponding sensor value (resistance or voltage) must be set.
• Confirm and save the tank configuration with button.
The newly added tank should now be visible on one of the PICO’s screens once you exit the settings menu.

7 Displaying battery, tank, temperature and air pressure measurements

You can switch between different screens by pressing the up and down arrow buttons.
There will be a separate screen for each battery with at least one connected current sensor (shunt).
Multiple batteries without a current sensor (measuring voltage only) may be joined on a single screen.
Up to four tanks and four thermometers are also joined on a single screen.
If there are more, they are divided into two (or more) screens.
There is also a separate barograph screen on PICO (not on PICOone).

7.1 BATTERIES SCREEN

Screens for showing battery data differ depending on how many current sensors are connected to a certain battery.

If the battery is only connected to a voltage sensor (without current sensor), the battery name, approximate state-of-charge (SOC) and current voltage are displayed. The calculation of SOC takes some time, so it may not be shown immediately after power-on.
Up to three batteries without current sensor can be shown on a single screen. If there are more, they are divided to two or more screens.

If the battery is connected to a voltage sensor and a single current sensor (shunt), some additional data are displayed: time to charge / time to discharge and electrical current (amps). SOC can be calculated more accurately if a current sensor is connected. Time to discharge is calculated by using an average consumption during some period of time.
If there is more than one current sensor (shunt) connected to the battery (e.g. for monitoring different consumers or generators, connected to the battery), their data (amps) is also shown on the battery page.

Pico’s algorithm for calculating state-of-charge (SOC) is not a simple Ah-counter. It is constantly monitoring battery current, voltage and temperature. These data are compared to the internal battery model and its parameters are constantly being adjusted so that the model fits to the actual data. The algorithm needs some time to adjust the parameters (learning phase) and it will improve accuracy during the first few cycles.

7.2 TANKS SCREEN

Tanks screen shows current level of connected and properly configured tanks. Up to four tanks can be shown on a single screen. If there are more, they are divided to two or more screens. For each tank, you can find its name, graphical representation of the current level, and numerical values of the current level as a percentage and as volume unit (liters, gallons). Depending on the selected tank types, they may be represented by different colors.

Tank order, colors, names, capacities and capacity units may be changed in the settings menu.

If the tank sensor is not selected in the tank settings or the sensor is disconnected from the PICO system, the “OFFLINE” symbol will appear on the screen. If this situation occurs, please check the sensor setting of the tank. If sensor is selected, please check if all the cables are properly connected.

7.3 TEMPERATURES SCREEN

Temperatures screen shows current temperatures of connected and properly configures temperature sensors. Up to four temperature sensors can be shown on a single screen. If there are more, they are divided to two or more screens.
For each sensor, you can find its name, graphical representation of the current temperature, and numerical value of the current temperature in chosen unit (°C or °F).

Thermometer order, names, min. and max. ranges and temperature units may be changed in the settings menu.

If the device is not selected in the temperature sensor settings or the device is disconnected from the PICO system, the “OFFLINE” symbol will appear on the screen. If this situation occurs, please check the device setting of the temperature sensor. If device is selected, please check if all the cables are properly connected.

7.4 BAROGRAPH SCREEN

The symbol on the left show the current air pressure trend. Arrow shows trend direction (up – rising or down – falling). If the pressure is rising or falling rapidly (1.0 mbar/h or more), two arrows are shown. Below the trend symbol, two values show the current trend and current sea level pressure.

You can find the barograph on the right side. The default interval for the barograph can be changed in the settings menu (BAROGRAPH ➔ TIME INTERVAL). However, you can also manually switch between different time intervals on the barograph screen by shortly pressing the button.

The screen is only available on PICO. There is no barograph support on PICOone.

8 Device configuration

You can enter the settings menu by long pressing the button. To navigate through the menu, use up and down arrow buttons. To select item, press enter button. To navigate one level back, use back button.

8.1 GENERAL SETTINGS

This menu offers screen, language, units and standby settings.
8.1.1 SCREEN

<table>
<thead>
<tr>
<th>SETTINGS</th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>SCREEN</td>
<td></td>
<td></td>
</tr>
<tr>
<td>AUTO BRIGHTNESS</td>
<td>OFF</td>
<td></td>
</tr>
<tr>
<td>BACKLIGHT</td>
<td>51%</td>
<td></td>
</tr>
<tr>
<td>MIN. BRIGHTNESS</td>
<td>11%</td>
<td></td>
</tr>
</tbody>
</table>

8.1.1.1 AUTO BRIGHTNESS

When auto brightness is enabled, PICO’s internal light sensors automatically adjust the screen brightness to match the ambient lighting conditions.

8.1.1.2 BACKLIGHT

This is the brightness level to be used during normal operation. When AUTO BRIGHTNESS is enabled, this is the maximum brightness level.

8.1.1.3 MIN. BRIGHTNESS

Min. brightness has two functions.

1. When PICO is in sleep mode the illumination is set to min. brightness level.
2. When AUTO BRIGHTNESS is enabled, it defines the minimum illumination.
8.1.2 DEVICE

8.1.2.1 AUTO STANDBY
If enabled, PICO goes into standby mode after STANDBY AFTER time.

8.1.2.2 STANDBY AFTER
Time after which the PICO goes into sleep mode if AUTO STANDBY setting is enabled.
8.1.2.3 SLEEP SCREEN
If SLEEP SCREEN is enabled, PICO will show sleep screen if it is in standby mode.

![](image)

8.1.3 LANGUAGE
To change PICO’s language, you can choose between English and German language. More languages will be added with future firmware upgrades.

8.1.4 UNITS
You can choose different international units for pressure, temperature, volume and altitude.

8.2 DATA MANAGEMENT
This menu enables you to set up alarms for certain measurements. Here, you can choose the quantity, the device, low and high values for alarm, and you can turn the high/low value alarms on and off.
- ALARM HIGH: High value alarm fires when the measured value is higher than the set up alarm value.
- ALARM LOW: Low value alarm fires when the measured value is lower than the set up alarm value.

After you select ALARM HIGH or ALARM LOW, the following alarm settings will appear:
- ALARM STATE: Used to enable or disable alarm
- ALARM VALUE: Limit value which fires the alarm
- SILENT: If this option is enabled, there will be no audible signal when the alarm fires. The alarm warning will only appear on PICO’s screen.
8.3 DEVICES

Here, you can manage all the devices that are connected to your PICO. When you connect a new module to your PICO system (e.g. a new shunt), some new devices will automatically appear on the devices list (e.g. current sensors, voltmeters, ohmmeters...). These devices can appear automatically because they are integrated into the modules. But “secondary” devices - those that are connected to the modules (BATTERIES, TANKS and THERMOMETERS) - will not be added automatically. If you connect a new battery, tank or thermometer, you have to add and configure the new device manually in the DEVICES menu.

Devices are grouped into different device types. To view, manage, add or delete a certain device, please select the corresponding device type from the list (e.g. BATTERIES, TANKS, ...).

8.3.1 BATTERIES

This is the list of the batteries which you have added to your PICO. By selecting a certain battery, you can view or change its settings, and you can delete the battery if you need to. By selecting “Add new”, you can add a new battery.

! After adding a new battery or changing settings of an existing battery, the algorithm for calculating state-of-charge (SOC) needs some time to adjust the parameters of its battery model (learning phase). It will improve accuracy during the first few cycles.

8.3.1.1 NAME

Here, you can view or edit the battery name.

8.3.1.2 TYPE

Here, you can view or change the battery type. The following types are supported:

- WET LOW MAINTENANCE
- WET MAINTENANCE FREE
- AGM
- DEEP CYCLE
- GEL
- LiFePO4
8.3.1.3 CAPACITY
The nominal battery capacity for the next C ratings: C/20, C/10 and C/5. If you don't know all the ratings, fill in just those ratings that you know. It is highly recommended to fill at least two C ratings (one is not enough for precise calculations). A “C” rating is simply a battery’s capacity (or Ah/amp hour rating) when discharged over a specific period. The “C” rating is usually specified on the battery label or on the battery datasheet. For correct operation, unknown ratings must be set as NOT SET!

8.3.1.4 VOLTMETER
A voltmeter which is connected to the battery. You can see only voltmeters that are not already used by other battery configurations.

| SETTINGS |
| VOLTMETERS |
| PICO INTERNAL 11.851V |
| SC500 [0216735249] 12.428V |
| ST107 [0167137256] U1 0.000V |
| ST107 [0167137256] U2 0.000V |
| ST107 [0167137256] U3 0.000V |

8.3.1.5 AMMETERS
Current sensor (shunt) which is connected to the battery. You can only select current sensors that are not already used by other device's configuration.
For a battery configuration without a shunt, leave current sensor empty.

8.3.1.6 TEMPERATURE SENSORS
Temperature sensor which is connected to the battery. You can only select sensors that are not already used by other device’s configuration.
8.3.2 TANKS
This is the list of the tanks which you have added to your PICO. By selecting a certain tank, you can view or change its settings, and you can delete the tank if you need to. By selecting “Add new”, you can add a new tank.

8.3.2.1 NAME
Here, you can view or edit the tank name.

8.3.2.2 TYPE
Here, you can view or change the tank type. You can choose between WATER, FUEL and WASTE WATER. Tank type is used solely for the color that will represent the tank on PICO’s screen. Each type has a different color.

8.3.2.3 SENSOR TYPE
You can select or change the sensor type that is used to measure the tank level. You can choose between RESISTANCE and VOLTAGE sensor types.

8.3.2.4 SENSOR
Voltage or Resistance sensor which is used to measure the tank level. Here, you can view or select the corresponding sensor. You can only select sensors that are not already used by other device’s configuration.

8.3.2.5 CAPACITY
Used to set up the tank full capacity.

8.3.2.6 CALIBRATION POINTS
Here, you can view the list of calibration points for this tank. You can also add new calibration points or remove existing ones. If you are adding a new tank, at least two calibration points have to be added for a proper configuration. More calibration points will enable PICO to show tank level more accurately. Up to 11 calibration points can be added. For each calibration point, tank fill volume and a corresponding sensor value (resistance or voltage) must be set.
To add a new calibration point:
- select CALIBRATION POINTS → Add New
- Two values will appear on the screen. The value on the left shows the tank fill volume, and the value on the right shows the corresponding sensor value (resistance in ohms or voltage). Press \( \bigcirc \) to set up a tank level. The left value turns yellow.
- Use arrow buttons to input a desired tank level in liters or gallons. Press \( \bigcirc \) to confirm the value.
- Now, the right value (resistance or voltage) turns yellow. A menu pops up which allows you to choose:
  o MEASURED VALUE: use currently measured value by the chosen sensor (resistance or voltage)
  o INPUT VALUE: when selecting this item, you can manually enter the desired value (resistance or voltage)
  o DELETE: when selecting this item, the calibration point is deleted

8.3.2.7 DISPLAY PRIORITY

This setting enables you to choose between the following display priorities: HIGH, MEDIUM, LOW and HIDE.
The display priority is used for ordering the tanks on PICO’s screen. When tanks are shown on the screen, those with HIGH display priority are shown first (leftmost), followed by tanks with MEDIUM display priority. Tanks with LOW display priority are shown last. If you select HIDE, this tank’s level will not be shown on the Tanks screen (it will be hidden).

8.3.2.8 DELETE

With this option, you can delete the selected tank.
8.3.3 TEMPERATURE SENSORS
This is the list of the temperature sensors which you have added to your PICO. By selecting a certain sensor, you can view or change its settings, and you can delete it if you need to. By selecting “Add new”, you can add a new temperature sensor.

<table>
<thead>
<tr>
<th>SETTINGS</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>&lt; TEMPERATURE SENSORS</strong></td>
</tr>
<tr>
<td>TEMPERATURE 1</td>
</tr>
<tr>
<td>TEMPERATURE 2</td>
</tr>
<tr>
<td>Add new</td>
</tr>
</tbody>
</table>

8.3.3.1 NAME
Here, you can view or edit the temperature sensor name.

8.3.3.2 TYPE
Here, you can view or change the temperature sensor type. Two types are supported: NTC 10K and NTC 5. These are 10kOhm and 5kOhm thermistors with a negative temperature coefficient.

8.3.3.3 DEVICE
The device and input which the sensor is connected to. For example: if the sensor is connected to the ST107 module and its input R1, select the option ST107 [serial number] R1.

8.3.3.4 DISPLAY PRIORITY
This setting enables you to choose between the following display priorities: HIGH, MEDIUM, LOW and HIDE. The display priority is used for ordering the thermometers on PICO’s screen. When thermometers are shown on the screen, those with HIGH display priority are shown first (leftmost), followed by thermometers with MEDIUM...
display priority. Thermometers with LOW display priority are shown last. If you select HIDE, this thermometer’s level will not be shown on the Temperatures screen (it will be hidden).

8.3.3.5 RANGE MIN

PICO shows thermometer with a graphical representation (vertical bar), together with the current numerical value. This option defines minimum value (temperature) of the thermometer bar.

8.3.3.6 RANGE MAX

PICO shows thermometer with a graphical representation (vertical bar), together with the current numerical value. This option defines maximum value (temperature) of the thermometer bar.

8.3.3.7 CALIBRATION

This setting enables you to calibrate the sensor value. If the displayed value is too high, you can use a negative calibration value (offset). If the displayed value is too low, you can use a positive calibration value (offset).

8.3.3.8 DELETE

With this option, you can delete the selected temperature sensor.
8.3.4  CURRENT SENSORS
List of all current sensors (shunts). Connected current sensors are added to the list automatically. You cannot manually add a new current sensor. In this list, you can view current readings (amperes) for all connected current sensors.

<table>
<thead>
<tr>
<th>SHUNTS</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>SC500[0216835249]</td>
<td>-1.01A</td>
</tr>
<tr>
<td>SCQ25[04377773054] 1</td>
<td>1.04A</td>
</tr>
<tr>
<td>SCQ25[04377773054] 2</td>
<td>0.00A</td>
</tr>
<tr>
<td>SCQ25[04377773054] 3</td>
<td>0.00A</td>
</tr>
<tr>
<td>SCQ25[04377773054] 4</td>
<td>0.00A</td>
</tr>
</tbody>
</table>

By selecting a certain sensor, you can view or change its settings.

8.3.4.1  NAME
Here, you can view or edit the current sensor name.

8.3.4.2  RANGE
PICO shows the current sensor with a graphical representation (horizontal bar), together with the current numerical value. This value defines the maximum value (amps) for the horizontal bar.

8.3.4.3  REVERSE CURRENT
If you swap the wires on the shunts terminals, PICO will show the opposite value of the current. E.g. when discharging, PICO will show charge current and vice-versa. In such situation, you can use this setting to reverse the current value. If you set this value to ON, PICO will reverse the measured value.

8.3.4.4  ADD CURRENT
There can be multiple current sensors (shunts) connected to a single battery. With this setting, you can define which currents must be added
together to get the total current on a certain battery. Set this value to ON for all the shunts which should be added together to calculate the total current on the battery. Set this value to OFF for all the other shunts.

Example 1: One sensor may monitor the total current on the battery, and other sensors may be used to monitor certain consumers or generators. Set this value to ON for the sensor which monitors the total current on the battery. Set this value to OFF for all the other sensors.

Example 2: Three shunts may be connected to the battery in parallel, to monitor the consumption in three different branches. To calculate the total current on the battery, the currents of all three shunts must be added together. In such scenario, set the value to ON for all three shunts.

### 8.3.4.5 BATTERY

Used to select the battery to which the sensor is connected to.

### 8.3.4.6 DISPLAY PRIORITY

This setting enables you to choose between the following display priorities: HIGH, MEDIUM, LOW and HIDE.

The display priority is used for ordering the current sensors on PICO’s screen. When current sensors are shown on the screen, those with HIGH display priority are shown first (at the top), followed by sensors with MEDIUM display priority. Sensors with LOW display priority are shown last (at the bottom). If you select HIDE, this sensor will not be shown on the Batteries screen (it will be hidden).
8.3.5 VOLTMETERS
List of all voltmeter sensors connected to PICO. Connected voltmeters are added to the list automatically. You cannot manually add a new voltmeter. In this list, you can view current readings (voltages) for all connected voltmeters.

<table>
<thead>
<tr>
<th>VOLTMETERS</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>PICO INTERNAL</td>
<td>11.851V</td>
</tr>
<tr>
<td>SC500 [0216735249]</td>
<td>12.428V</td>
</tr>
<tr>
<td>ST107 [0167137256] U1</td>
<td>0.000V</td>
</tr>
<tr>
<td>ST107 [0167137256] U2</td>
<td>0.000V</td>
</tr>
<tr>
<td>ST107 [0167137256] U3</td>
<td>0.000V</td>
</tr>
</tbody>
</table>

8.3.6 OHMMETERS
List of all ohmmeters connected to PICO. Connected ohmmeters are added to the list automatically. You cannot manually add a new ohmmeters. In this list, you can view current readings (resistance in ohms) for all connected ohmmeters.

8.3.7 COULOMB COUNTER
For each connected current sensor, a corresponding Coulomb counter will also appear on the devices list. Each Coulomb counter shows total electric charge (in Ah, amp hours) that has been transferred through this sensor until now. By selecting a certain Coulomb counter, you can manually reset the counter to zero.
8.4 WI-FI

This menu offers basic Wi-Fi settings for your PICO.

8.4.1 OPERATION
When set to ON, Wi-Fi module is enabled. Otherwise it is disabled.

8.4.2 AUTO OFF
Defines the time after which the Wi-Fi module will automatically turn off (auto turn-off) if not connected to a smartphone. Setting 0s prevents auto turn-off.

8.4.3 MODE
Currently, only AP mode is supported. When in AP mode, PICO creates its own wireless network. If you want to connect to PICO with your smartphone, please connect to the network whose name corresponds to SSID setting value. Wireless network password can be changed with PASSWORD setting. Default password is pico<first four digits of the serial number>. Example: if your PICO’s serial number is 12345678, then the default Wi-Fi password is pico1234.

8.4.4 SSID
SSID means Service Set Identifier. This is the name of Wi-Fi network that is created by PICO. Default SSID is Pico<last four digits of the serial number> Example: if your PICO’s serial number is 12345678, then the default Wi-Fi SSID is Pico5678.
You can find the serial number on the sticker on the back side of PICO or in the menu under SYSTEM → SYSTEM INFO. This is default SSID and you can change it.

8.4.5 TCP IP
Shows the default IP of PICO.

8.4.6 TCP PORT
Shows the default TCP port for communicating with PICO.

8.4.7 UDP IP
Shows the default IP to which UDP live data packets are sent.

8.4.8 UDP PORT
Shows the default UDP port for communicating with PICO.

8.4.9 PASSWORD
Default password: pico<first four digits of serial number>
Example: if your PICO’s serial number is 12345678, then the default Wi-Fi password is pico1234.
You can find the serial number on the sticker on the back side of PICO or in the menu under SYSTEM → SYSTEM INFO. This is default password and you can change it.
You cannot see current password in the menu, but you can change it by selecting the PASSWORD setting. Minimum password length is 8 characters.

8.4.10 WI-FI RESET
Should you wish to reset the Wi-Fi settings to default values, you can do so by selecting this option. New (default) Wi-Fi SSID and password are displayed on the screen. Please memorize the SSID and password so that you will be able to connect to PICO after Wi-Fi reset.

8.5 DATE & TIME
In this menu, you can set the time, date, and time zone manually, but we do not recommend to do it, because these values will be overridden by your smart phone settings each time you connect the phone to your PICO and start Pico application. The exact time is important for the proper functioning of the device and hence it is synchronized with your phone on each connection.
However, time format and date format settings can be changed freely as these will not be overridden by your phone settings.

8.5.1 TIME
Set the current time. This value is overridden each time you connect the phone to your PICO and start Pico application.

8.5.2 DATE
Set the current date. This value is overridden each time you connect the phone to your PICO and start Pico application.

8.5.3 TIME ZONE
Set the current time-zone. This value is overridden each time you connect the phone to your PICO and start Pico application.

8.5.4 TIME FORMAT
You can choose your desired time format from the list.

8.5.5 DATE FORMAT
You can choose your desired date format from the list.

8.6 BAROGRAPH

8.6.1 ALTITUDE
Set the current PICO’s altitude to correctly calculate MSLP – Mean Sea Level Pressure. The mean sea level pressure (MSLP) is the average atmospheric pressure at sea level. This is the atmospheric pressure normally given in weather reports.

8.6.2 TIME INTERVAL
The time interval is the default interval used when plotting the graph of pressure (barograph).

8.7 SYSTEM

8.7.1 COMMUNICATION DEVICES
List of all the devices (modules) that are connected to the Pico, together with the bus communication quality (%).
8.7.2 SYSTEM INFO
Displays PICO's serial number, currently installed firmware version and free memory.

8.7.3 SYSTEM RESET
Deletes all the devices from PICO.

9 Mobile App
PICO can be remotely controlled by your smart phone via WiFi connection. Using the app, you can monitor current (live) data for the batteries, tanks, thermometers and barograph. You can also change PICO’s setting on your smart phone, and easily upgrade PICO’s firmware to a new version when it becomes available.

Find your PICO – Battery Monitor app in your mobile store by scanning the QR code below or visiting below link for your app store.

https://itunes.apple.com/us/app/pico-battery-monitor/id1217159039
10 Firmware Upgrade

To ensure the best PICO experience it is recommended to upgrade PICO’s firmware to the latest version. You can do this via PICO – Battery Monitor smartphone application available on your smartphone application market as described in the previous chapter 9 Mobile App.

NOTICE! It is important to download the latest PICO – Battery Monitor application before proceeding with the firmware upgrade. The upgrade process is done in the following steps:

1. Install or upgrade the PICO – Battery Monitor application on your smartphone.
2. Turn on Wi-Fi on your PICO.
3. Connect your smartphone to PICO via Wi-Fi.
4. Launch the PICO – Battery Monitor application on your smartphone and click LIVE VIEW.
5. Go to menu settings and click upgrade PICO’s firmware. The upgrade process will put PICO device in upgrade mode.
6. Long press the button on your PICO to confirm the firmware upgrade. The upgrade process can take few minutes.
7. After the upgrade, PICO reboots and is ready to use.
